

AIR+))) BeCode

AIR Administrator

Convenient and easy management of the locking system via an app - even if a card is lost.

The access authorizations can be assigned, expanded or canceled by the app. The administration is still possible with an Admin Card as an alternative.

With the AIR Administrator, all access rights can be transferred to the respective lock via NFC.

An integrated import and export function allows you to share or synchronize data between the app and an existing customer system.

The app is preinstalled on a Nokia Windows Phone.
(Not available via the app store)

AIR Administrator features the following functions:

- Teaching and learning:
 - Masterdevice
 - Secondary-Masterdevice
 - Admin Cards
 - Keycards
- Adding keycards with and without database
- Database import and export
- Reading status (role, battery status)
- Reading logfiles
- Emergency unlocking
