

BeCode AIR Multi Control terminal

This technology allows enabling a very dynamic system for cabinet management without having to wire the cabinets. The control terminal can be installed to be operated stand-alone or can be integrated into the network.

The access authorization for the individual locks is written into the memory of the RFID card by the operating terminal. At the same time, a time limit can be assigned, too.

Several applications can be implemented simultaneously on one control terminal: for example, an available cabinet can be assigned to a user for a limited period of time, or the user can select an available cabinet for an indefinite period of time.

Features Overview

- Assigning privileges and cabinets
- Time limitation available
- May be used by permanent or changing users
- User history can be read from the control terminal
- Optional integration into existing networks
- Bidirectional exchange between the card and the lock, or the card and the control terminal
- Reading status (role, battery status)
- Reading logfiles
- Encrypted communications
- Supports MIFARE DESFire EV1 and EV2
- Supports multi-application RFID cards
