

## BeCode EVO installation for major IT company

BeCode's EVO locks have been chosen to facilitate personal lockers at a major IT company in the UK. The EVO keyless and cable-free locks offer advanced security with the ease of use needed for quick simple access.

### **BeCode EVO and BeCode EVO+**

Electronic locking systems for furniture and lockers that work entirely without keys, power cables or transponders. Created to enhance furniture design, BeCode EVO and BeCode EVO+ operate as a sophisticated lock as well as a handle mechanism. Based on a so-called 'free-spinning' setting, the locks can be turned left or right at random without activating the locking mechanism. To activate, simply enter the numbers and symbols for the individual code by rotating and pressing the knob.
