

BeCode EVO chosen for agile working environment

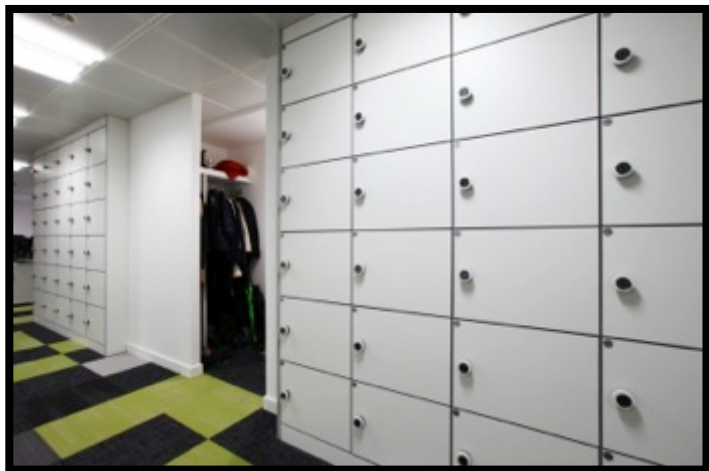

“The ease of working with BeCode’s superb ‘EVO’ lock mechanisms made this simplicity itself” Bob Cole, Panel Plan Sales Director

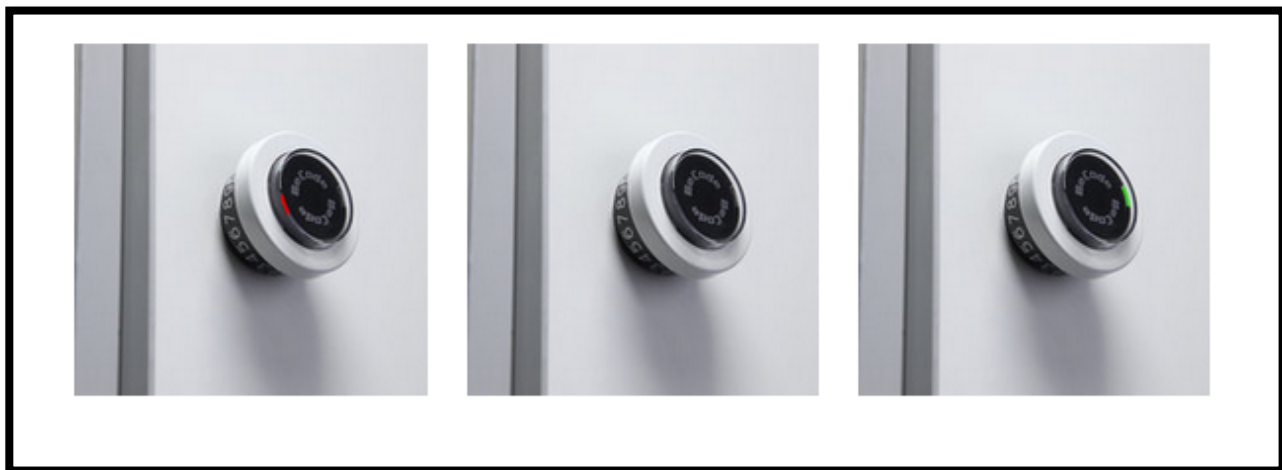

“We are over the moon with the finished result!” CBRE Birmingham

BeCode has been delighted to work with Panel Plan and interior design experts, City Office on the completion of another successful project.

The task for Panel Plan was to fit 132 lockers in the newly refurbished offices of CBRE, in the UK's second city, Birmingham. CBRE are one of the world's leading commercial property and real estate service advisers. The building itself overlooks the impressive St Philips Cathedral in the heart of Birmingham.

BeCode EVO digital locks are extremely simple to operate electronic locking systems that work entirely without keys, power cables or transponders. Created to enhance furniture design, BeCode EVO operates as a sophisticated lock as well as a handle mechanism. Based on a so-called 'free-spinning' setting, the locks can be turned left or right at random without activating the locking mechanism. To activate, users simply enter the numbers and symbols for the individual code by rotating and pressing the knob. Green and red flashing lights clearly indicate the locking process. BeCode EVO is perfect for environments where lockers are permanently assigned, or for agile environments where users only require a locker on a temporary basis.

It took a little over two days to complete the job” said Bob Cole, Panel Plan’s Sales Director. “The whole project was a pleasure to work on - a large, open plan office which had been carefully designed by City Office, and the ease of working with BeCode’s superb ‘EVO’ lock mechanisms made this simplicity itself” Bob explained.

The inclusion of the personal lockers has been an integral part of CBRE’s introduction of agile working practices and a paperless office system. The results certainly speak for themselves with a spokesperson for CBRE commenting; “We are over the moon with the finished result!”
